

Lord of the Mysteries Community Platform

Feature Roadmap: MVP vs Future Versions

Introduction

This roadmap defines the phased implementation strategy for the Lord of the Mysteries Community Platform. The goal is to launch a valuable MVP before expanding into a complete fan ecosystem.

Application Overview

The **Lord of the Mysteries Community Platform** is a dedicated web or mobile application designed to serve as the central hub for fans of the *Lord of the Mysteries* universe. The platform combines social networking, community discussions, and a comprehensive knowledge base into a single ecosystem where users can connect, share content, discuss theories, explore accessed detailed lore, and track their reading progress without relying on multiple external platforms.

The application provides an engaging social experience through features such as user profiles, posts, comments, likes, following, and notifications, while also offering specialized tools tailored to the LOTM community, including a spoiler management system, reading progress tracker, searchable wiki, chapter summaries, and categorized discussions. By integrating these features into one platform, the application aims to create a safe, organized, and immersive environment where both new and experienced readers can interact with the community while avoiding unwanted spoilers.

Designed with scalability and long-term growth in mind, the platform follows a phased development approach. The initial release focuses on delivering a functional Minimum Viable Product (MVP) containing the core social and knowledge-sharing features. Future versions will expand the platform with advanced community features such as forums, groups, theory voting, interactive visualization, real-time messaging, recommendation systems, and AI-powered tools, ultimately establishing the application as the definitive digital community for the *Lord of the Mysteries* fandom.

Version 1 (MVP)

Goal: Build a platform LOTM fans can use in near future.

Authentication: Register, Login, Logout, Email Verification, Password Reset.

User Profiles: Avatar, Username, Bio, Favorite Character, Favorite Pathway, Reading Progress.

Social Feed: Create/Edit/Delete Posts, Feed, Likes, Comments, Replies.

Following: Follow/Unfollow, Followers, Following.

Search: Users, Posts, Wiki.

Wiki: Characters, Pathways, Sequences, Artifacts, Organizations, Locations.

Tags: Character, Chapter, Pathway.

Spoilers: Mark, Hide, Chapter Filtering.

Reading Progress: Track Current Chapter.

Notifications: Likes, Comments, Follows.

Moderation: Reports, User Bans.

Admin Dashboard: Manage Users, Reports, Wiki.

MVP Summary: Accounts, Profiles, Posts, Comments, Likes, Follow System, Wiki, Search, Tags, Spoiler System, Reading Progress, Notifications, Admin Panel, Reports.

Version 2

Forums, Groups, Notes, Chapter Summaries, News, Achievements, Better Notifications.

Version 3

Theory System, Interactive Pathway Tree, Timeline Explorer, Character Relationship Graph, Reading Companion Mode, Profile Customization, Recommendation System.

Version 4

Real-time Chat, Community-editable Wiki, Advanced Search, Events, AI Assistant, AI Summaries, AI Theory Analyzer, Mobile Applications.

Development Order

Phase 1: Authentication, Profiles, Posts, Comments, Likes.

Phase 2: Following, Search, Notifications.

Phase 3: Wiki, Tags, Spoilers, Reading Progress.

Phase 4: Admin Dashboard, Moderation, Reports.

Launch MVP.

Phase 5: Forums, Groups, Notes, Chapter Summaries.

Phase 6: Theory System, Timeline, Pathway Tree, Relationship Graph.

Phase 7: Chat, AI, Mobile.

Conclusion

Build only the MVP for Version 1. Release, collect our feedback, then expand through later versions.
